

Git

Hands-On 5

Description:

This hands-on lab covers repository clean-up procedures, checking branch states, pulling updates from a remote repository, and pushing your local changes back to the remote repository.

WorkFlow

Step 1: Verify Status and Inspect Branches

Verify Clean State: Check that your local master branch is in a clean working state.

git status

List Available Branches: View all available local and remote branches to ensure you are on the correct tracking branch.

git branch -a

Step 2: Sync and Push Changes to Remote

Pull Remote Updates: Pull the latest changes from the remote Git repository into your local master branch.

git pull origin master

Push Pending Changes: Push your pending local changes to the remote repository.

git push origin master

Verify Remote Reflection: Confirm that your updates have successfully synchronized and are reflected in the remote repository.

git status

Git Bash & Output

```
MINGW64:/c/Users/AADI/gitDemo

AADI@Aadi MINGW64 ~
$ cd gitDemo

AADI@Aadi MINGW64 ~/gitDemo (master)
$ git status
On branch master
Your branch is up to date with 'origin/master'.

nothing to commit, working tree clean

AADI@Aadi MINGW64 ~/gitDemo (master)
$ git branch -a
* master
  remotes/origin/master

AADI@Aadi MINGW64 ~/gitDemo (master)
$ git pull origin master
From https://github.com/Aadi4-gif/GitDemo
 * branch                master       -> FETCH_HEAD
Already up to date.

AADI@Aadi MINGW64 ~/gitDemo (master)
$ git push origin master
Everything up-to-date

AADI@Aadi MINGW64 ~/gitDemo (master)
$ |
```
